

LeRoy Fire Station

Owner: LeRoy Fire District

Award: 2006 Outstanding Project Award from The Rochester Chapter of The Construction Specification Institute.

Exterior: Two-story brick and stucco.

Challenges

As headquarters to an emergency response team, fire stations have a strict list of criteria that must be met. The crew needs a place to rest and live for shifts, state-of-the-art technology must be easily accessible, and the vehicle fleet must be maintained and quickly reached in a clean, open environment. Not only did WEI meet all these challenges but they did it within the constraints of a renovation project.

Highlights

The architect incorporated the arches of the old fire station with the new structure. As a result, the refurbished LeRoy Fire Station showcases WEI's ability to renovate and update buildings in a way that assimilates the older parts with the new for a coherent and flattering structure.

Versatility

The LeRoy Fire Department project emphasizes WEI's reputation as a true general contractor. From water treatment plants to historical renovations to fire stations, WEI has the versatility to handle the size and scope of any project.
